

STOCK MANAGEMENT SYSTEM

Problem statement:

The existing stock management system does not have more features. Stocks are not shown clearly and user interface is not good.

SRS:

The stock maintenance system will allow the employees to record information of items available in store. The new system will have a window based desktop interface to allow users to enter information of sales, purchase orders, change employee preferences and create reports. The system retains information on all items in shop.

→ Owner has a manager which manages the inventory. The owner can order, sell stock. He can make payments, report quality issue, return stock and track order.

→ The manager maintains a ledger, do's quality check and reports to own.

→ In inventory, we can add, remove edit and search the inventory. We can calculate the required stock.

→ The order details contain details of order.

→ The stock can be viewed, edited, added and removed.

→ The supplier tracks order details and supplies the stock and receives payment.
